EDUCATION

Honours Bachelor of Computer Science

Major in Computer Science with Co-op, Minor in Pure Mathematics

University of Waterloo

2018 — 2023

SKILLS

Languages | Python, C, C++, Go, TypeScript

Frameworks & Libraries | React, Redux, NumPy, Pandas, JAX, Playwright, FastAPI

Infrastructure & Tools | PostgreSQL, sqlite, Docker, AWS, Snowflake

Systems & Concepts | Wasm, CMake, web scraping, machine learning

Exploring | libuv, gRPC, distributed systems, Terraform, Redis, Kafka, Kubernetes, Rust, Zig

EXPERIENCE

Solutions That Matter

Toronto, ON

Software Engineer

Dec 2023 — Jun 2025

- Developed a web application for processing and managing order information, facilitating over \$1 million in revenue.
- Developed an ETL service in Python for automatic order reconciliation, reducing a 12+ hour manual task to minutes.
- Built a Google Sheets integration to provide live updates to different dealers while ensuring confidentiality.

DealMaker

Toronto, ON

Data Engineering Intern

May 2023 — Sep 2023

- Enabled Business Intelligence operations, primarily by writing SQL and charting in Metabase.
- Continuously improved the ETL service, e.g. adding new destinations or optimizing with batch API requests.
- Prototyped a machine learning algorithm to forecast the success of capital raises.

Royal Bank of Canada

Toronto, ON

AI Engineering Intern

Sep 2021 — Apr 2022

- Helped develop a reinforcement learning based trading algorithm (Aiden) used to trade over \$100 million daily.
- Developed a C++ market exchange simulation test bed, yielding a 5x improvement in training time.
- Improved the algorithm's performance on ETFs by developing ML-derived signals that indicate days of high volatility.

Arcturus Networks

Toronto, ON

Software Engineering Intern

May 2020 — Aug 2020

- Created a React and ZMQ socket-based video surveillance application using modern web development practices.
- Implemented numerous features including live alerts, notifications, and pipeline parameter configuration.
- Improved developer experience by optimizing Dockerfiles and CMake cache usage, leading to a 20x build speedup.

ROSS Intelligence, Inc.

Toronto, ON

Machine Intelligence Engineering Intern

May 2019 — Aug 2019

- Drove customer growth initiatives by creating and extending microservices, enabling access to a demo of the app.
- Deployed the settings page, supporting functionality to modify, view, and cancel subscriptions.
- Built reusable UI components in React and migrated codebase from JavaScript to TypeScript.

PROJECTS

Spock | A spoken programming language  <https://zoravur.com/spock-a-spoken>

- Created a tree-walk interpreter for a spoken programming language consisting of english words and no punctuation.
- Used OpenAI's STT model Whisper to dictate a complete solution to Project Euler problem 1.

Taan Generator | A spoken programming language  <https://github.com/zoravur/taangenerator>

- Trained a transformer to generate taans (runs of musical notes) in the Indian classical raga (mode) Yaman. ([demo](#))
